

Dezemberblüte!!!

Beitrag von „Enrico“ vom 22. Dezember 2011, 14:52

Hello Matteo,

all the different Bubi have the same parents: Butterfly x Biene Maya. Most of the crossings with Butterfly tend to be very long and also need to be rather long to flower. This heritage belongs to Trichocereus vasquezii. I know only a few crossings, which are not long!

So don't bother, you were not a good HWH-breeder:D!

Ciao

Erich
