

# Bewurzelungspulver

**Beitrag von „el48tel“ vom 2. Mai 2022, 08:08**

Over the weekend I have repotted some cuttings I took of *Echinopsis ancistrophora*. From 8 cuttings 7 had made roots. One had become woody and not rooted but not rotted and had not dried. I have cut the base off it. I will dry it again. I will dust the base with rooting powder. I will place it onto John Innes compost #2 mixed 50 50 with Perlite.

I will report my results in a few months.
