

Echinopsis hybrids with Hildewintera as father?

Beitrag von „morgan“ vom 25. September 2012, 18:02

I've tried many crosses this year (at least around 20) with Hildewintera hybrid "Aurora" as father. No fruits except for what looks to be a small fruit is forming on a chamaecereus hybrid (it's still quite newly pollinated so it can still abort).

Since a hybrid like "Aurora" has echinopsis genes inside it I think it would be possible to use it's pollen for a successful cross with an echinopsis, but no luck so far.

Has anyone experience from crosses like this?
