

Kreuzungsversuch Rebutia x Lobivia

Beitrag von „matteo2g“ vom 12. Oktober 2012, 14:37

sehr interessante!

a consideration about the cross between different genera. Sometimes the effect of the external pollen is only to "open the gate" for self-pollination, so you are not sure unless you see father's features in the seedlings. This does not mean your cross is not what you think!

So I'm really curious to see what comes out!

moreover, I'd like to ask you about how you graft such small seedlings on Peresk. How do you keep the whole pot after grafting?

the other picture with many scion on one small pereskiosis "small tree" is really amazing! have you got a picture of when you had just grafted them?

many greetings,
matteo
