

Sticky black lumps

Beitrag von „muddyliz“ vom 23. August 2013, 14:54

Hi Dave,

this might be black rot. See here:

<http://www.hybridenforum.com/f...wthread.php?t=1292&page=3>

Normally, the symptoms stop by themselves. But if the black spots become tarry, this is the way, the fungus releases his spores.

My advice: Scratch off as much of the tarry substance as possible, then spray with a good fungicide. Keep the cactus dry for at least 4 weeks. Avoid high humidity.
