

Own hybrid I call "Stella-Maria"

Beitrag von „morgan“ vom 14. Februar 2014, 00:11

@ Enrico

Thank you!

Both photos ARE reality! I strongly dislike photoshop etc.

If I have a flower that I like, I give it a name. I haven't registered the hybrid anywhere, I won't do either (I'm not a member of AG).

I compared my "Stella-Maria" with e.g. the hybrid "Wörlitz" yesterday (a hybrid that is highly "modern" right now, maybe because of a dark red/magenta) and I personally think that "Stella-Maria" has something more than just its magenta flower. Yes, the shape of the flower is not unique but it has broad petals, it's filled, it's got wrinkled tips of the petals and dark filaments. I like it!

First photo is taken under less lit conditions, second photo is taken in bright sunlight.

I won't send it to a competition of hybrid of the year!

Morgan
