

Cold treatment helps flower produce?

Beitrag von „Vikan“ vom 14. Juni 2014, 20:10

Amazing!

During the cold period also the pot has made an evolution!

It has grown also, became greenish and changed from round to octagonal (or hexagonal, difficult to see?). There must be a secret stuff in the snow in China.

May be the pollution of the air has a good side for cactus growers?

Yes, indeed, it's a simple joke of mine.

Congrats! A flowering FLS in this size is rare, i think!

Have a nice eve!

Bye, Hoss
