

Echinopsis Hybride JT 672 Wolfstein.

Beitrag von „morgan“ vom 10. Juli 2010, 00:28

I think that it's absolutely right to have high demands on what hybrids deserve a name and which ones doesn't. 🤔

One possible solution to the issue could be: name the hybrids which lives up to the strong demands from AG with the prefix (or suffix) "AG"*****, and maybe even the year: "AG-10 tjoho" (it would be a task for the board members of AG to decide each year which hybrids would be good enough to earn **their** name). 😊

I'm about to join AG again, I've stopped being a member because I can't read a word of german, but I'll become a member again as soon as I get some help to translate the communication.:)
