Hallo. Wie kann man jetzt Lobivia-Sauger wurzeln? Dankeschön

Beitrag von „el48tel“ vom 15. September 2021, 18:44

if they have callous then stand them on mixture of equal parts of John Innes number 2 compost with Perlite. I keep the mixture slightly damp not wet until roots appear. If they don't have callous then leave them for a few days before standing them on the compost.
