

Cold treatment helps flower produce?

Beitrag von „Bravo-CLIA“ vom 14. Juni 2014, 14:17

Hello everyone

firstly, the author permit me to post what he meet.

Can you see the photos?

A 10cm+ Flying Saucer gorws in a 800-1000m above sea level area of China.

At winter it suffered from cold snow, it was said it suffered -8 degrees.

[Blockierte Grafik: <http://ww2.sinaimg.cn/mw690/59d8cfefgw1ehdwjd3990j20rs0ijaf0.jpg>]

Next year it bloomed!!!

His soil is made up of many rocks and little soil, from September 2013, he stopped watering it to make sure it can survival the cold winter.

It shocked me as much, maybe let the TH outdoor could be a great help on blooming flowers.

Amazing!

During the cold period also the pot has made an evolution!

It has grown also, became greenish and changed from round to octagonal (or hexagonal, difficult to see?). There must be a secret stuff in the snow in China.

May be the pollution of the air has a good side for cactus growers?

Yes, indeed, it's a simple joke of mine.

Congrats! A flowering FLS in this size is rare, i think!

Have a nice eve!

Bye, Hoss
