

Arolen Grafting, Echinopsis sp vs Harrasia jusbertii

Beitrag von „Bravo-CLIA“ vom 12. Juli 2015, 04:49

Hello Everyone

Here I share you the result of my arolen grafting.

all were operated at June 2015.

The label is 1.0 cm in width, a good reference for the buds I think.

When the larger one grow up, I will remove them, and let the smaller one grow 😊

I will report the result in the future for how they grow and who blooms first.

photo taken in this morning, 12/07/2015. now China is 6hours earlier that Germany.

Here a photo taken 24days ago.

Although it suffered the sunk of the surface but it grows well now.

Unfortunately, the KE2098-1(the one arolen on H.jusbertii) died. Maybe I am not correct on cutting the Arolen.

Hello Yunhan Zheng,

interesting experiment. How is it going on?

Beitrag von „Bravo-CLIA“ vom 23. Oktober 2015, 09:40

Hello Edel
Here I update the new progress.
Now there are only 1 bud on each stock.

The larger one is removed, photo taken at 18th Oct, 2015.

Next Spring, I will repot these plants. The one on Echinopsis is on a really bad condition, due to bad root developed.

Best Regards
Yunhan Zheng
